

ALEJANDRO DIAZ

U.S. Citizen | Active Secret Security Clearance (DoD)

(512) 810-4120 | alexjdiaz2503@gmail.com | linkedin.com/in/alejandiaz25 | alejdiaz25.github.io

EDUCATION

University of Texas at Austin

Bachelor of Science in Mechanical Engineering

Track: Quantitative Systems Engineering & Management | Minor: Entrepreneurship

Dec 2026

GPA: 3.86/4.0

WORK EXPERIENCE

Saronic Technologies | Manufacturing Engineering Intern

Jun 2026 – Aug 2026

- Owned the full engineering lifecycle of an RF-antenna torque tool: first-principles design, in-house sourcing, eBOM, drawings, and an ECO proposal; eliminated antenna marring (0 cases since rollout) and reclaimed 49+ hr/yr fleet-wide
- Led a DMAIC-framed cost study of a \$1.28M/yr structural-adhesive program; identified \$923K/yr in achievable savings by converting to instrumented bulk-dispense tooling chosen for future SCADA integration, at a 47-day payback and 677% ROI
- Architected and shipped 7+ Palantir Foundry and full-stack tools (React/TypeScript, Node/Express, Python), including custom ontology objects, pipelines, and Workshop dashboards adopted by active users across Engineering, PMO, and Manufacturing Engineering; replaced manual ERP lookups with sub-second (0.2s) part search across 79,000+ PO records and 15 product lines
- Built a first-principles bearing-stress model gating a fleet-wide fastener DFMA; screened 7 joint types and baselined 218 part numbers, identifying ~\$13.3K/yr savings and 167 washers/vessel eliminated via nut/washer-to-flange conversion

Northrop Grumman Corporation | Continuous Optimization & Refinement Engineering Intern

May 2025 – Jul 2025

- Developed a Python multivariate regression model integrating SMR and laser gauge metrology data for F-35 fixture loading vector estimation and alignment process optimization; feasibility study validated a novel corrective action methodology targeting an NC condition affecting ~33% of units, each carrying 2–10 hr of unplanned rework
- Automated quality management workflows using Power Automate, decreasing QA response times by 21.1% within three weeks through standardized cross-functional digital reporting procedures
- Contributed to Graph-RAG LLM architecture for F-35, B-2, and E-2D programs; defined prompt hierarchy and validation protocols for procedure-driven retrieval and response generation in classified manufacturing workflows
- Developed Power BI executive dashboards with automated data pipelines to surface production KPIs, track manufacturing defects, and automate a manual reporting process saving ~312 hr annually

Northrop Grumman Corporation | Manufacturing Engineering Intern

May 2024 – Jul 2024

- Designed and implemented DFM-optimized 3D-printed production aids in CATIA with integrated precision depth gauges, reducing tool validation time by 25%; directed work-cycle studies and standardized production processes for F-35B tooling
- Conducted root cause analysis on BusinessObjects manufacturing data, identifying sealant disbond failure modes and quantifying \$800K+ annual rework and 2,800 labor hours; developed Tableau dashboards correlating CMM Romer Arm metrology trends, implementing corrective actions reducing unit rework by 10–20 hr

Agave Worldwide LLC | Lead Product Development Engineer

Jul 2024

- Applied DFMA to design a 36" smokeless fire pit in SolidWorks; developed parametric sheet metal models with integrated bending and die design, resolving airflow distribution and thermal management for high-rate production

RELEVANT EXPERIENCE

Texas Rocket Engineering Lab | Lead Mechanical Design Engineer

Jan 2025 – Feb 2026

- Sole design engineer for the 3DOF cold-gas RCS; derived state-space equations for thrust, pressure, and mass flow and sized the nitrogen tank and performance envelope via parametric MATLAB models, enabling PID attitude/roll stabilization software
- Led structural redesign of the TVC actuator subsystem for the Halcyon MK1 liquid bi-propellant rocket; executed multi-criteria trade studies on material properties and load margins to determine lightweight actuator architecture

Longhorn Racing Electric | Dynamics Mechanical Design Engineer

Sep 2023 – Feb 2025

- Redesigned front and rear unsprung SolidWorks assemblies via ANSYS FEA and GD&T-driven optimization, achieving 44% rear assembly and 36% front upright weight reductions under fatigue, thermal, and dynamic load requirements
- Developed magnetic flux analytical frameworks to redesign wheel speed sensor architecture, achieving $2.5\text{--}5\times$ signal amplitude improvement over prior design; selected catalog magnets and validated on vehicle

LEADERSHIP & SERVICE EXPERIENCE

Beta Theta Pi Fraternity | Vice President of External Programming

Nov 2023 – Present

- Directed planning and operations for a 250-person charity event; managed a \$30K budget, negotiated contracts for 10%+ cost savings, and raised \$35K for the Texas 4000 For Cancer organization

ADDITIONAL

CAD & Analysis: CATIA, SolidWorks, AutoCAD, Autodesk Inventor, Fusion360, OnShape, ANSYS, PolyWorks, GD&T

Software & Skills: Python, MATLAB, Java, Palantir Foundry (AIP), Power Automate, Power BI, Tableau, BusinessObjects, Teamcenter, Arena PLM, Excel, GitHub, Jira, Spanish (conversational)

Manufacturing: Lathe, CNC Mill, CNC Router, Waterjet, Laser Cutting, FDM 3D Printing, Romer Arm, SMR Tracker

Honors: FRC 6800 Valor: Engineering Excellence, World Championship (2023); UIL Robotics Gold (2022)
